

MOBILE WATER TREATMENT & BOTTLING PLANT SL 800 MIL

Water is the most important natural resource of the planet and is the fundamental element for human life.

It's necessary to provide the right daily quantity of water to everyone in order to guarantee efficiency of every human activity.

To rehydrate the body, drinking water must be fresh, pure and rich in minerals.

SERAM MOBILE WATER PLANT is the ideal solution to the need of drinking water as it can be used with any kind of water source (the plant is able to treat both fresh and salt water coming from lakes, rivers, sea, wells or marshes), it's modular and can be configured on user's need, is easy to use and requires low maintenance.

Moreover, thanks to the possibility to instantly provide the right quantity of water, **SERAM MOBILE WATER PLANT** puts an end to the disadvantages of storing and transporting water with the consequent reduction in exercise costs and environmental pollution.

SERAM MOBILE WATER PLANT can be installed on a heavy truck or on a trailer and is ready to be used on the field by simply connecting it to the water source. Every component is fully inspectable to permit easy cleaning and ordinary maintenance.

SERAM MOBILE WATER PLANT can be painted with military livery.

MODEL
SL 800 MIL

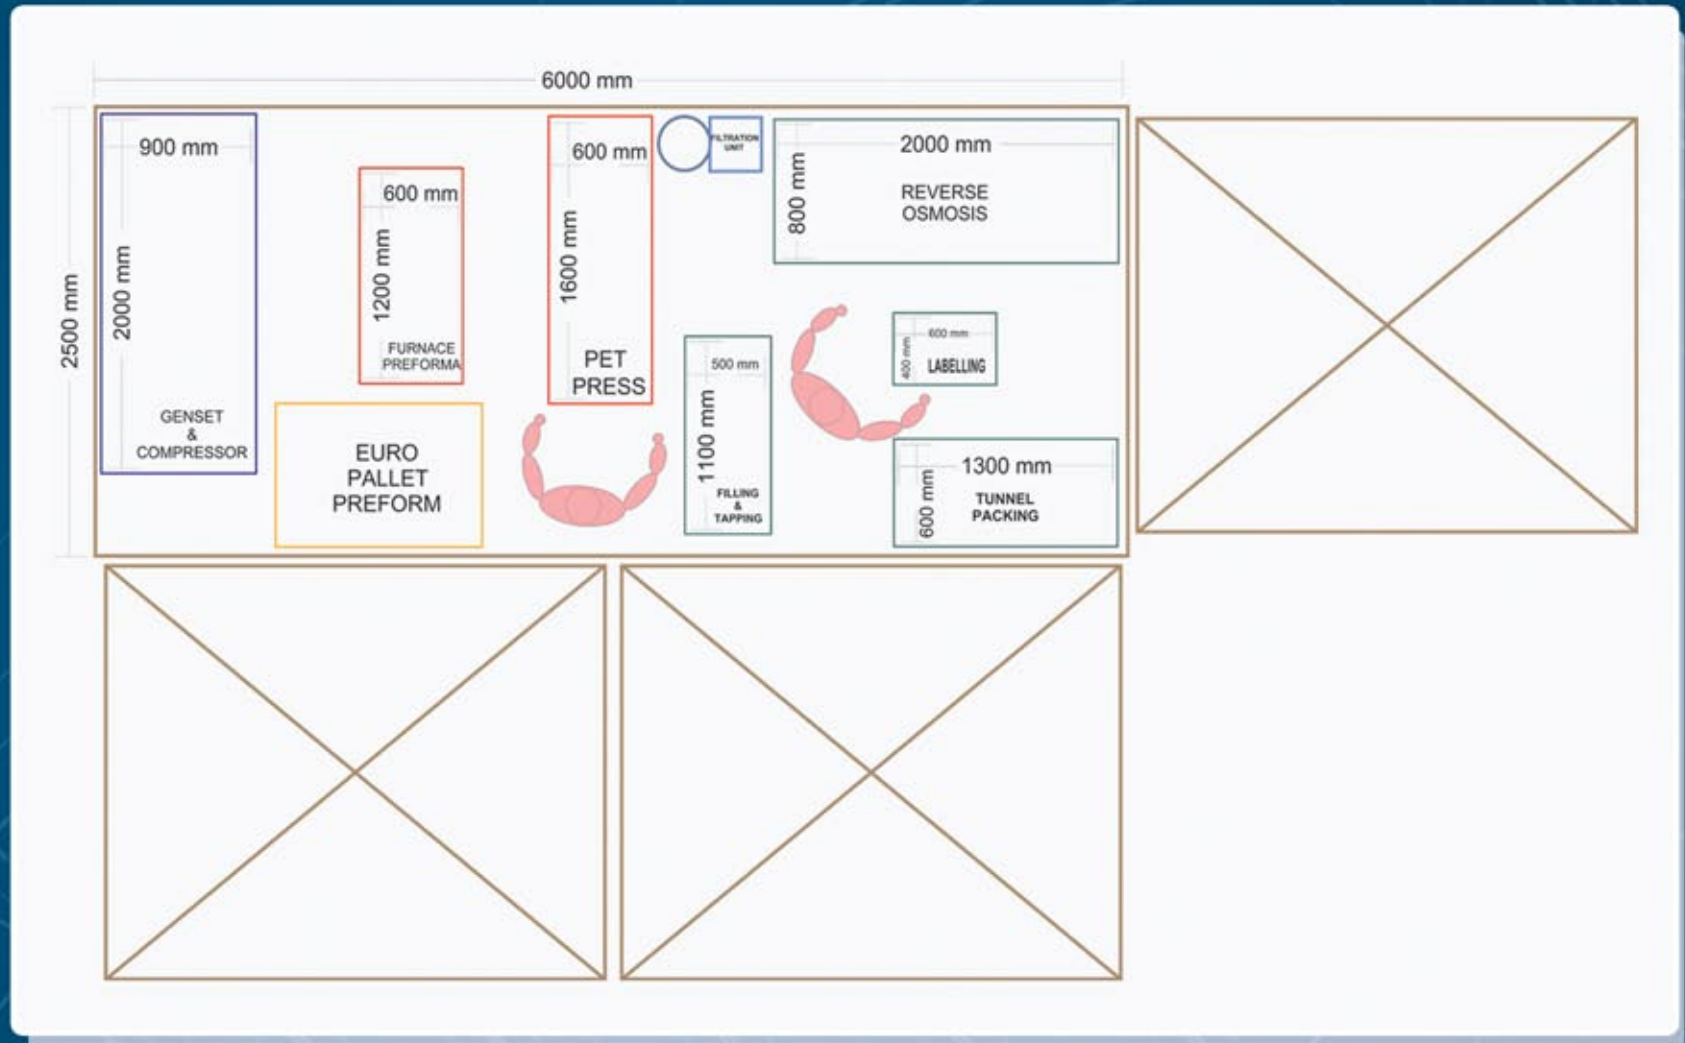

USE FOR
BOTTLED WATER

CAPACITY
800 LT/HR

FITTED ON
20" CONTAINER

INSTALLED
HARDWARE

- 20KVA generator
- potabilizer
- portable H₂O test kit
- bottles forming equipment
- filling machine
- tapping machine
- labelling machine

On board silenced engine adopts the latest technology and high quality grind-proof materials. It features at low oil consumption, stable performance, easy maintenance, low operation cost, low emission.

It can be chosen in both air or water cooling version in order to operate under a wide range of temperature and weather conditions.

Water, coming from outside, is purified by means of a series of active carbon filters, reverse osmosis process and UV rays that guarantee a perfect sterilisation. The preset parameters for potablisation can be adjusted according to local regulation. The plant is provided with a portable water test kit to guarantee complete analysis of water parameters. The plant can be adjusted to the production needs of the user and can deliver up to 800 litres per hour.

WATER TREATMENT PLANT contains in a unique module, of a standard container dimension, a complete, self motorised plant for potabilisation of water, blowing and forming of PET capsules, filling, tapping and labelling bottles. Thanks to its modular layout can be customized to specific needs and can be easily used by a small staff.

WATER TREATMENT PLANT can be used to produce bottles from 0,5 lt to 10 lt or can be fit with self distributor for cold, flat or sparkling water.
